## County Adds Online GIS Data Viewer

FAYETTEVILLE – Cumberland County Information Services has added a GIS Data Viewer to the county's website to expand map viewing options. The improvements were made in response to feedback from the public and will aid citizens using the maps to conduct personal or commercial business. These online features are available at <http://gis.co.cumberland.nc.us>.

The GIS Data Viewer offers county maps that can be viewed through several layers with one click. Any number of layers can be turned on or off. The layers include city limits, utilities, parcels, streets, addresses, contours, buildings, subdivisions, soils and zoning.

The GIS Data Viewer has a legend for each layer and tools to measure area and distance. The map shows some public water and sewer lines and provides links to the Cumberland County Tax Assessor's website for each parcel.

The new website follows the addition of the Tax Parcel Viewer and the Polling Place Finder to the county's website in February to offer better online GIS map service. For more information, call the GIS division of the Cumberland County Information Services department at 323-6119.
