Update on Salmonella Outbreak

FAYETTEVILLE, NC - The Cumberland County Department of Public Health continues to investigate the outbreak of Salmonella infection reported at the Holiday Inn Bordeaux. As of Tuesday, May 14, at 2 p.m. there are 18 individuals with signs and symptoms consistent with Salmonella infection; four of them are hospitalized.

Based on its investigation, the Health Department is now asking that individuals who consumed food or beverages at the Holiday Inn Bordeaux since May 1 and have developed symptoms within three days of that visit to call the department at 910-433-3638.

The Holiday Inn Bordeaux serves food at two restaurants, the All American Sports Bar and Grill and the Café Bordeaux, and from their banquet kitchen.

The Health Department has also set up a "Salmonella Hotline" at 910-433-3824. Cape Fear Valley Health System has a Care Link health education line staffed by registered nurses. Call at 615-LINK (5465) with questions about Salmonella infection.

To stop the further spread of the illness, the Health Department advises that handwashing is the best control measure. People with nausea, vomiting and diarrhea symptoms need to make sure they are staying hydrated and should seek medical care from their private doctor, urgent care or emergency room if their symptoms do not improve.

For additional information about the Cumberland County Department of Public Health, please call 910-433-3600 or visit with someone at the information desk. Comments are welcome and can be submitted on our website at www.co.cumberland.nc.us/health/comment_form.aspx. The Health Department is located at 1235 Ramsey St. in Fayetteville.

Health Department Alerts Public to Possible Salmonella Outbreak

-more-

FAYETTEVILLE, NC – The Cumberland County Department of Public Health is working with the N.C. Division of Public Health to investigate a gastrointestinal illness outbreak among staff and patrons of a local hotel’s restaurants. There are two confirmed cases of salmonella and one individual has been hospitalized.

As of Monday, the Health Department had identified 16 individuals with signs and symptoms consistent with salmonella: nausea, vomiting and diarrhea. All share a common denominator -- they ate at the same establishment, the Holiday Inn Bordeaux, within the same time frame, Tuesday, May 7 and Wednesday, May 8. The Holiday Inn Bordeaux has two restaurants, the All American Sports Bar and Grill and The Café Bordeaux. There is also a banquet kitchen.

“We are actively working with the hotel and restaurant management and with state officials to resolve this as soon as possible,” said Cumberland County Health Department Director Buck Wilson.

“We are fully cooperating with the local and state authorities and appreciate their efforts to control the spread of the illness,” said Scooter Deal, general manager at the Holiday Inn Bordeaux.

The Health Department is asking anyone who developed symptoms after eating at the Holiday Inn Bordeaux on Tuesday, May 7 or Wednesday, May 8 to call the department at 910-433-3638. Also, for additional information you can call the “Salmonella Hotline” at 910-433-3824.

“We want people to call the health department even if they have recovered so we can ask them questions in hopes of identifying the source of the contamination. We have questions about food sources and travel,” Wilson said.

To stop the further spread of the illness, the Health Department advises that handwashing is the best control measure.

People need to make sure they are staying hydrated and should seek medical care from their private doctor, urgent care or emergency room if their nausea, vomiting and diarrhea symptoms don’t improve.

SALMONELLOSIS (commonly called “*Salmonella infection*”) is an infection caused by bacteria called *Salmonella*. It is transmitted by contaminated food, water, or contact with an infected animal or person. It is commonly transmitted via the fecal-oral route, from one infected person to another. Symptoms may be mild and a person can continue to carry *Salmonella* for weeks after symptoms have subsided.

Most persons infected with *Salmonella* develop diarrhea (sometimes bloody), fever, and abdominal cramps 12 to 72 hours after infection.

- The illness usually lasts 4 to 7 days, and most persons recover without treatment. However, in some persons, the diarrhea may be so severe that the patient needs to be hospitalized. In some cases, the person must be treated with antibiotics.
- Salmonellosis affects all age groups. Children are the most likely to get salmonellosis. Groups at greatest risk for severe or complicated disease include infants, the elderly, and persons with compromised immune systems.
- Salmonellosis is more common in the summer than winter.

-end-

- There is no vaccine to prevent salmonellosis.
- The best way to prevent the spread of this illness is handwashing, especially after using the bathroom and before handling or preparing food.

For additional information about the Cumberland County Department of Public Health, please call 910-433-3600 or visit with someone at the information desk. Comments are welcome and can be submitted on our website at www.co.cumberland.nc.us/health/comment_form.aspx. The Health Department is located at 1235 Ramsey St. in Fayetteville.
