## **GIS Data Viewer Upgrade Adds Features, Tax Values**

FAYETTEVILLE – A new Cumberland County Geographic Information Services web application is available. The GIS Data Viewer 2.0 features expanded layers, tools and the ability to create spreadsheets. The viewer replaces the Tax Parcel Viewer and offers the same information plus a few new layers and features.

The new data viewer provides the 2017 Cumberland County real property revaluation information with a link to the Tax Administration Office's property information sheet.

The new GIS Data Viewer is available on the County's GIS Maps & Apps site at [co.cumberland.nc.us/is\\_technology/gis.aspx](http://co.cumberland.nc.us/is_technology/gis.aspx). New features on the data viewer are:

- **Design** - New interface featuring an IntelliSense search textbox, responsive design for use in mobile devices and various browsers.
- **Layers** – The new GIS Data Viewer adds the Airport Overlay District, Townships, the 2015 Parcel Layer with most recent historic data and Fire Tax Districts.
- **Tools** – A new “Search” tool allows users to view information about properties by using a line, rectangle or polygon shapes to select properties on the data viewer. A new “Find” tool also allows users to search for properties by street or subdivision. The viewer also includes a 500 and 1,000-foot buffer tool which will allow a user to see a list of all properties within the buffer. The list can be exported to a Comma Separate Value File Format, which stores tabular data in plain text that can be imported into a spreadsheet or word document.

For more information, contact GIS Information Services Coordinator Mary Ann Steinmetz at 910-678-7552 or email [msteinmetz@co.cumberland.nc.us](mailto:msteinmetz@co.cumberland.nc.us).
